

2018-2019 HIGHLIGHTS

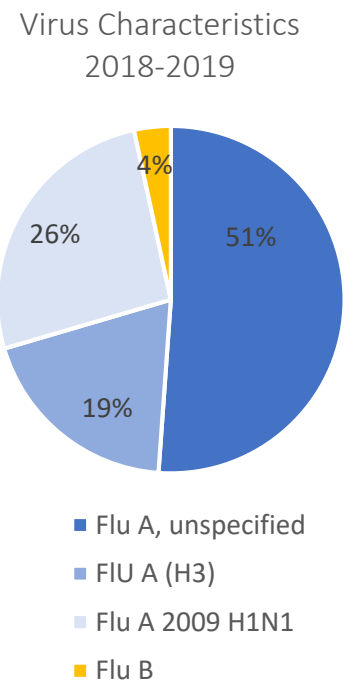

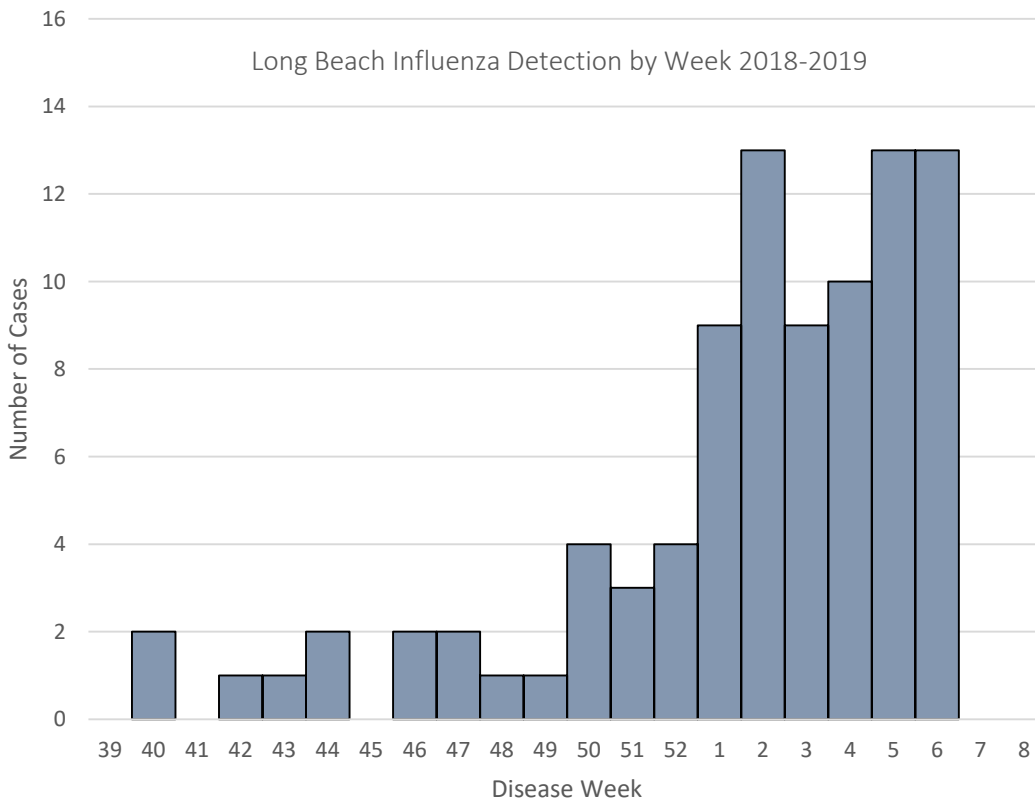

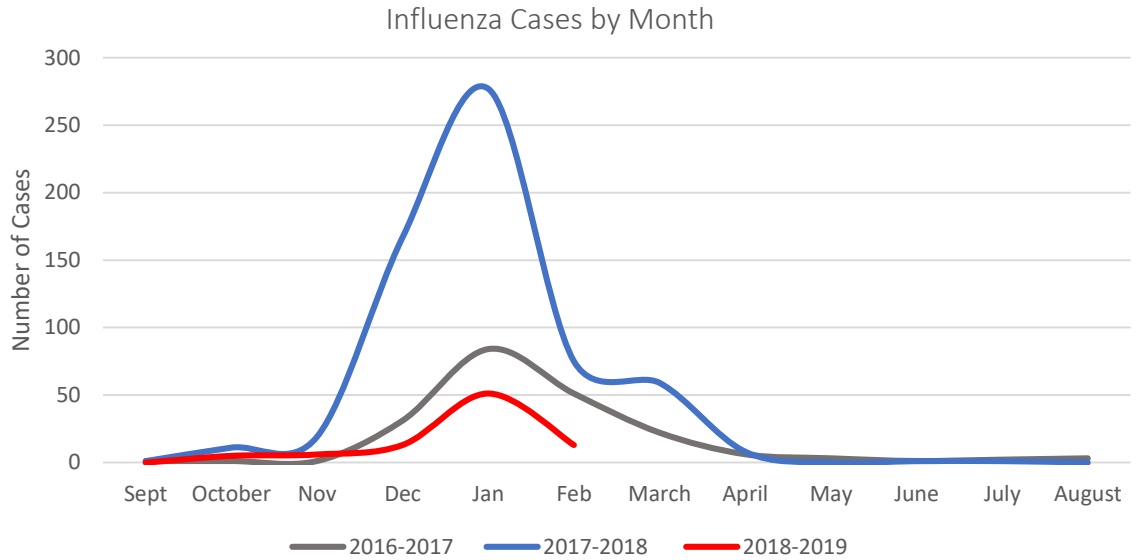

Statewide, influenza remains widespread, and Influenza A 2009 (H1N1) remains the most commonly identified flu virus this season. Among sentinel laboratories in LA County, 14.7% of specimens tested positive.³ In Long Beach, activity remains lower to date than the previous two influenza seasons. The median age among Long Beach cases was 47 (0-104) years. All recorded deaths have been in persons over 60 years of age. There have been no pediatric influenza-associated deaths reported in Long Beach.

LONG BEACH SEASON SUMMARY

Total Cases¹
88

Deaths²
3

Outbreaks
0

1. Influenza is voluntarily reported to the health department. The total number of cases may not reflect the true number of influenza cases in Long Beach. Numbers are not final and there are delays in reporting are expected each week
 2. Number of deaths is based on influenza-coded deaths from death certificates. They are not necessarily laboratory-confirmed and may be an underestimate of all influenza-associated deaths.
 3. *Influenza Watch Week 5*. LA County Public Health, Acute Communicable Disease Control
